I'm a full stack engineer who's always looking to learn, with a love of problem-solving and an affinity for design and UX.

Experience

Veygo

Full Stack Engineer

Jul 2021-Present

I've worked on multiple cross-functional teams and projects from delivering new insurance products to our customers, adding features and a/b tests to our websites, to building scalable backend services.

I've taken the lead on several projects, like the redevelopment of an important customer purchase journey. This involved running discovery sessions with stakeholders and the team, splitting the work into iterative milestones and leading our technical approach along with the delivery, which led to us solving a major customer pain point, improving conversion and reducing contact. Also, our move to a BFF model, gaining experience in Node.js while developing our initial infrastructure and APIs. This set the standards for future teams and reduced the complexity of our account web app.

Mentoring others has been an important part of my time here, both ad-hoc within teams and more formally through regular catch ups and sessions. Additionally, I have worked on engineering-wide initiatives, helping set engineering principles and establishing conventions for all aspects of development at Veygo, from testing to pull requests.

Junior Full Stack Engineer

Jul 2019-Jul 2021

I began my professional journey here joining a great team of engineers, gaining experience with React, Django and AWS as part of an Agile Scrum team.

I was also involved in the rewrite of our mobile app, gaining experience with different aspects of mobile development.

Skills

Typescript (React, React Native & Node)
Python (Django, Flask)
GraphQL
Infra (Terraform, Serverless)
CI/CD (CircleCI)
AWS
Pool 🎱

Education

Loughborough Uni
Sep 2016- Jul 2019
Computer Science - 2.1

Certifications

AWS Cloud Practitioner
